NOTES

1. The symbol ၀ in the tables and in the following notes represents any Burmese consonant character, and the letter **C** represents the romanized equivalent of that character. The symbol → means “is romanized”.
2. Except when accompanied by a dependent vowel character or an end-of-syllable mark, a Burmese consonant character or a consonant character combination should be romanized with a following vowel letter **a**: မဒမာ → **madama**, အက → **aga**, ကလိ → **kali**, သာငယ် → **thangè**, ပြဇင် → **pyazin**.

3. At the beginning of a word, the vowel-carrier အ should not be romanized, unless followed by a consonant character that does not carry a vowel character or an end-of-syllable mark, in which case the character အ should be romanized **a**: အကာ → **aga**, but အိုဘဲ → **obè**, အပ် → **at**. At the beginning of a medial or final syllable, အ should be rendered by a hyphen: မအူ → **ma-u**, သီးပင်အိုင် → **Thibin-aing**.
4. The independent vowel characters should be romanized without a hyphen at the beginning of words and with a hyphen at the beginning of medial and final syllables: သြဘာ → **awba**, ဧဏီ → **eni**, ကြေး → **kye-e**, ကြောင်ဥကျဉ် → **kyaung-ugyin**.
5. When two consonant characters are written stacked one above the other without an end-of-syllable mark, the upper character should be romanized first, followed by the lower character, and then the vowel and consonant characters, if any: သဒ္ဒါ → **thadda**, အန္တိမဘဝ → **andimabawa**. It should be noted that the alternative romanizations shown in the tables of consonant characters and consonant character combinations do not apply to the upper character: ဥက္ကဋ္ဌ → **ukkada**.
6. When the letter **n** at the end of a syllable within a romanized word is followed by **g** or **y** at the beginning of the next syllable, the letter sequences should be rendered **n-g** and **n-y**, respectively, in order to differentiate those sequences from the digraphs **ng** and **ny**: အင်းကွတ် → **in-gut**, ကွန်ရက် → **kun-yet**, but ရွှေငန်း → **shwengan**, ညိညာ → **nyinya**, တိုင်အောင် → **taing-aung**. Similarly, the letter sequence consisting of **t** at the end of a syllable within a romanized word, followed by **h** at the beginning of the next syllable, should be rendered **t-h** in order to differentiate that sequence from the digraph **th**: ဟက်ဟက်ပက်ပက်ရယ် → **het-hetpetpetyè**, but ဝသီ → **wathi**.
7. The tone marks ◌် and ◌း are not represented in romanization: ဘေးမဲ့ → **bemè**, တုံစား → **tanza**, ပြီးစီး → **pyizi**.
8. The vowel mark ၵ indicates a change in the romanization of the preceding syllable from **a** to **in**: သဘော → **thinbaw**, ဘင်္ဂလားအော် → **Bin-gala Aw**, စင်္ကာပူ → **Sin-gabu**.
9. Although of infrequent occurrence, a number of character ligatures and abbreviations are found in Burmese writing. In the event that a character not shown in the tables is encountered, a reference source should be consulted.
10. ိုည် is romanized **i**, **in** or **e**, depending on pronunciation. A reference source should be consulted in case of uncertainty.
11. The Romanization columns show only lowercase forms but, when romanizing, uppercase and lowercase Roman letters as appropriate should be used.
