Footnotes

Children self reported if they had white marks on the front of their teeth that won't brush off and thinking about white marks on their teeth, the children selected which set of photographs they thought their teeth looked more like :

Set N = No opacities, Set S = Mild opacities, Set A = Aesthetically significant opacities

Those children who said they did have white marks, reported if the appearance of these marks bothered them

Wide variation from other results - treat overall PCT figures for self perception of enamel opacities with caution

September 2011

PCT did not partake in survey

See Footnotes for more detailed descriptions

Footnotes

Children self reported if they had white marks on the front of their teeth that won't brush off and thinking about white marks on their teeth, the children selected which set of photographs they thought their teeth looked more like :

Set N = No opacities, Set S = Mild opacities, Set A = Aesthetically significant opacities

Those children who said they did have white marks, reported if the appearance of these marks bothered them

Wide variation from other results - treat overall PCT figures for self perception of enamel opacities with caution

September 2011

PCT did not partake in survey

Footnotes

Children self reported if they had white marks on the front of their teeth that won't brush off and thinking about white marks on their teeth, the children selected which set of photographs they thought their teeth looked more like :

Set N = No opacities, Set S = Mild opacities, Set A = Aesthetically significant opacities

Those children who said they did have white marks, reported if the appearance of these marks bothered them

Wide variation from other results - treat overall PCT figures for self perception of enamel opacities with caution

September 2011

PCT did not partake in survey

See Footnotes for more detailed descriptions

Footnotes

Children self reported if they had white marks on the front of their teeth that won't brush off and thinking about white marks on their teeth, the children selected which set of photographs they thought their teeth looked more like :

Set N = No opacities, Set S = Mild opacities, Set A = Aesthetically significant opacities

Those children who said they did have white marks, reported if the appearance of these marks bothered them

Wide variation from other results - treat overall PCT figures for self perception of enamel opacities with caution

September 2011

PCT did not partake in survey

Footnotes

Children self reported if they had white marks on the front of their teeth that won't brush off and thinking about white marks on their teeth, the children selected which set of photographs they thought their teeth looked more like :

Set N = No opacities, Set S = Mild opacities, Set A = Aesthetically significant opacities

Those children who said they did have white marks, reported if the appearance of these marks bothered them

Wide variation from other results - treat overall PCT figures for self perception of enamel opacities with caution

September 2011

Those who reported NO I don't have or DON'T KNOW if I have white marks
